AI CHEAT SHEET

FOR SMALL BUSINESS OWNERS

Find the work *AI could do for you.*

Most owners use AI to write emails. That is just the start. Use these four pages to find what else it could take off your plate.

MON	TUE	WED	THU	FRI
Weekly plan	Proposal	**Competitor check**	Client work	**Invoice chasers**
Client call	**Meeting notes**	Networking	**Sales figures**	Planning
Inbox triage	Team 1:1	Client work	Supplier call	**Weekly report**
Site visit	**Social posts**	**Follow-ups**	**FAQ answers**	Time off

The amber ones? That is the work AI could help with. **What would yours be?**

01
Discover
What AI can do

02
Find
The right task in your week

03
Brief
Turn it into a clear prompt

04
Check
Before you use it

01 DISCOVER
What AI can do *for your business*

An AI opportunity is any task in your week where AI could save you time, help you do it better, or do something you could not do alone. Not a new system. Not a big project. A task you already do.

Writing emails is *just the start.*

Here are eight ways AI can support a small business. Circle the ones that sound like your week.

Research and investigate
Explore markets, compare competitors, investigate suppliers or prepare for client meetings. Check sources and dates.

Think and brainstorm
Talk through a challenge, test assumptions, develop an offer or explore collaboration ideas.

Create and communicate
Develop images, videos, presentations, guides and other material using your direction and expertise.

Plan your marketing
Explore customer needs, shape campaigns, organise content and analyse campaign results.

Analyse and understand
Explore spreadsheets, identify trends, group customer feedback and build reports or dashboards.

Capture and organise
Speak your thoughts into your phone. Turn your own notes into themes, questions and next actions.

Improve how work happens
Map a process, identify repeated steps, develop checklists and organise business knowledge.

Connect and automate
With suitable integrations and permissions, route enquiries, update records and trigger reminders or reports.

Capabilities depend on the AI service, connected systems and information available. Ask what it can access and verify what it produces.

What would help you most? Tick one.

- [ ] Save time
- [ ] Understand information
- [ ] Create something
- [ ] Improve a decision
- [ ] Follow through

02 FIND
Find the work *AI could do for you*

Go through your week. Ask three questions about each task, then decide what to do with it.

Is it worth handing to AI? Ask three questions

Do you do it again and again?
Weekly reports, follow-ups, the same answers.

Is it mostly words or numbers?
Reading, writing, sorting notes or spreadsheets.

Could you teach a new starter?
And trust the result once you had checked it?

Yes to any one? It is worth a try. It does not need all three.

How could AI help?

OFFLOAD
Take it off your plate
Notes, reminders, first drafts, sorting requests.

AUGMENT
Help you do it better
Research a market, test an idea, read a spreadsheet.

BEYOND
Do what you could not alone
A video, a dashboard, data you never had time for.

Then decide what to do with it

ELIMINATE
Stop doing it
Not needed? Drop it. Never automate a pointless task.

AUTOMATE
Let technology do it
AI or a simple tool handles it. You check the results.

DELEGATE
Hand it to someone else
A team member or helper, so you focus on what matters.

Your week, task by task

Task (include the small, everyday ones)	Again and again?	Words or numbers?	Could teach a starter?	Offload / Augment / Beyond	Eliminate / Automate / Delegate
Planning my working week	✓	✓	✓	*Offload*	*Automate, I approve the plan*

Choose one *small experiment*

☐ Clear benefit ☐ Suitable info ☐ Can check it ☐ Small enough

I will try _____ by _____

I will know it helped if _____

03 BRIEF
Turn one task into *a clear prompt*

Brief AI the way you would brief a new starter on their first day: everything they need to do it right without coming back to you.

	Example: planning my working week	Your task
INTENT **What you want** What do you want to achieve or understand?	Turn this week's tasks, requests and deadlines into a clear plan with three priorities.	
EVIDENCE **What it needs to know** What is happening, and what can you safely share?	A voice note of everything on my plate, the deadlines that cannot move, and last week's plan.	
TASK **The help you need** Research, compare, analyse, create, organise or plan?	Organise everything, flag clashing deadlines and suggest what could be simplified, delegated or supported by AI.	
CONSTRAINTS **Rules to follow** Limits, privacy needs and approval points?	One page, plain English. Explain your reasoning and flag assumptions. Ask before adding anything to my calendar.	
FORMAT **What it gives back** A visual, comparison, shortlist or action plan?	Three priorities at the top, then a day-by-day plan I can copy into my calendar.	

Stuck? Let AI interview you
Say: *"Ask me questions about anything unclear before you start."* Your answers become the brief.

Not right first time? Keep going
Treat it as a first draft. Say what to change, as you would with a new starter. Save the prompt that works.

OR JUST SAY IT INTO YOUR PHONE

"Help me make sense of my week. I will talk through outstanding work, customer requests, deadlines and ideas. Let me finish, then ask questions about anything unclear. Flag competing deadlines, explain your reasoning and help me choose three priorities. Ask before adding anything to my calendar."

Ideas for what to ask for

- Competitor comparison
- Campaign concept
- Video storyboard
- Spreadsheet dashboard
- Process map
- Weekly action plan

04 CHECK Check it *before you use it*

AI gives you a strong first draft. You make it right.

80/20

AI does the 80.
The 20 is yours.

The last 20% is where your value sits

AI drafts, sorts and structures. You add your judgement, your knowledge of your customers and your voice.

Check the facts

AI can sound sure and still be wrong. Check any figure, name or claim before you rely on it.

Watch what you paste

Leave out client names, figures and personal details. Some free tools may learn from what you type, so check the settings.

Your final check

- [ ] **Facts, sources and calculations checked**
  Especially any figure, name or date.
- [ ] **Sensitive information protected**
  Nothing shared that a client would not expect you to share.
- [ ] **My own judgement applied**
  It sounds like me and fits my customers.
- [ ] **Messages, changes and other actions approved by me**
  AI asks before it sends, books or updates anything.

Get the process right first. *Then add AI.*

Automating a broken process only makes the mess faster.
